

OVERHEAD LINES BICYCLES

The bicycles are suitable to fit aircraft warning spheres on single lines and to fit spacers on two, three and four bundled conductor lines.

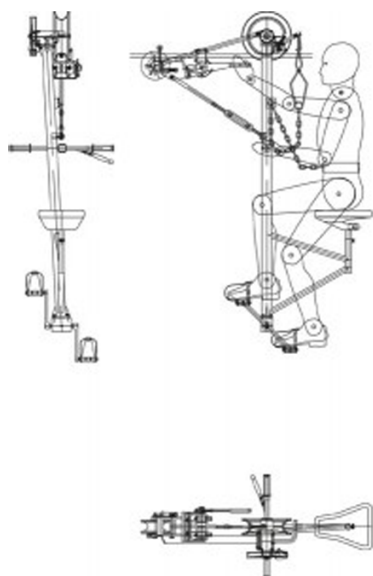

By pedalling forward the bicycle moves backward in order to provide the operator with necessary working space.

The bicycles are equipped with a disc brake on the driving wheel and with an additional safety clamp, which brakes directly on the conductor.

A meter counter and safety chains are also provided.

For models BIB011 and BIQ031 the spacing between conductors can be set adjusted with pitch of 50 mm.

Special models with different characteristics are available on demand.

BIS002

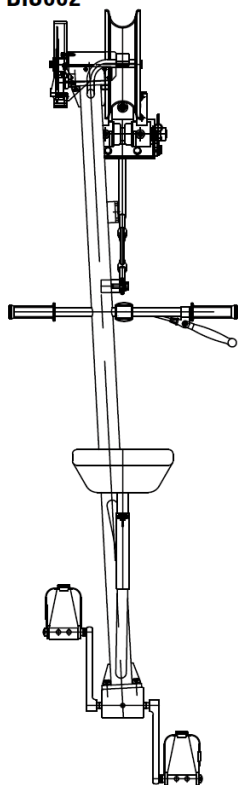

BIB011

BIQ031

BIS002

Mod. BIS002

Light alloy / Single conductor line

Capacity	100 kg
Weight	26 kg

Options available :

BDC002 - Basket for working devices

Mod. BIT023

Light alloy / 3 bundled conductors

Capacity	100 kg
Weight	38 kg

Options available :

BDC004 - Basket for working devices

Note : distance between conductors to be specified

Mod. BIB011

Light alloy / 2 bundled conductors

Capacity	100 kg
Weight	34 kg

Options available :

BDC003 - Basket for working devices

Mod. BIQ031

Light alloy / 4 bundled conductors

Capacity	100 kg
Weight	42 kg

Options available :

BDC005 - Basket for working devices
